## Thomasville Experience: Highlight Fillers for the DIY Customer or Installer

If you have ever received a call requesting a site inspection by a customer that claims the cabinets just don't fit, you're not alone. As a designer you can talk until you are blue in the face with a DIY Customer or Contractor about fillers and they may have no idea what you are talking about. Let's face it, people have different skill sets but if you've never installed cabinets you just may not know. This tip is for those Novice Installers or DIY customers that have never had to use fillers. Let's help them "see" where they are on the Floor Plan and Elevations.

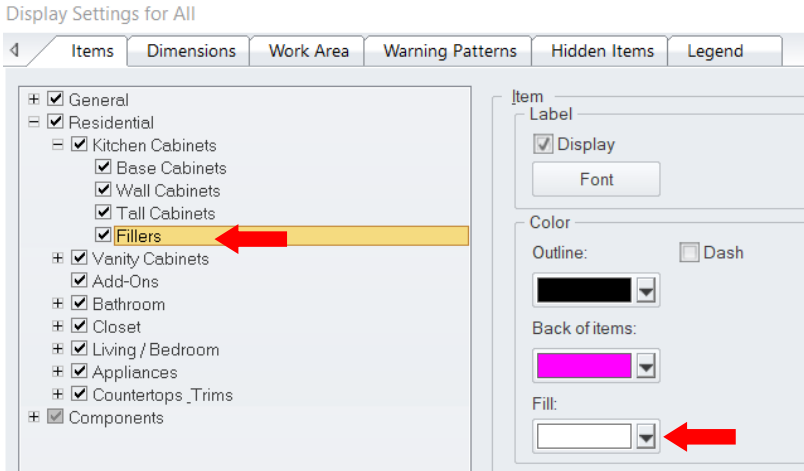

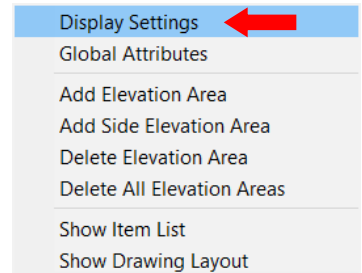

In this simple kitchen layout, a filler has been used against the wall above the refrigerator to allow the refrigerator door to swing past 90° so that the internal vegetable drawer will pull out without hitting the door.

#11 on the Legend is listed as a F330.

*See Next Page to continue:*

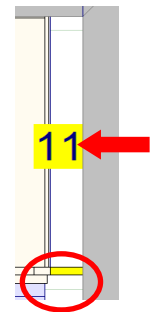

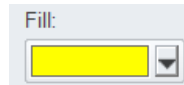

**Thomasville Experience: Highlight Fillers for the DIY Customer or Installer**

To make sure the person installing this set of cabinets understands what they are seeing, lets make some changes. Right click on the Floor Plan away from your design and select Display Settings.

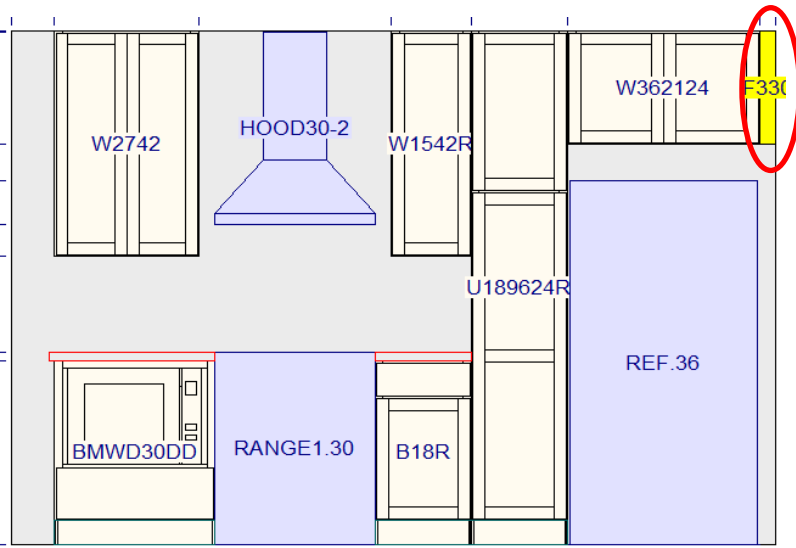

Under the Items tab find Fillers in the Residential category.

Notice the Fill box is white, change it to your desired Highlighted color.

Your filler & legend # will now display your selected color. Follow these same steps on each of your elevations.

**It's that Easy!**
